FOR IMMEDIATE RELEASE

VendorInsight® Releases Software Version 7.2.2

Cincinnati, OH, November 16, 2016---VendorInsight®, an award-winning software solution that helps financial institutions manage third-party vendors and assess risks, is pleased to announce the launch of Version 7.2.2.

This update includes features that will increase VendorInsight®'s ease-of-use by allowing for more customizability and streamlining the workflow and presentation of information within the system.

"I am confident that the release of 7.2.2 will help simplify out users' vendor management process while providing them more control over it than ever before," comments Executive Director and Vice President, Jay Fitzhugh.

Several enhancements were added based on the support of multiple current software users during VendorInsight®'s Users Group Meeting which takes place annually so that customers can engage in important dialogue about recent regulatory updates, key challenges that organizations are facing in compliance, as well as the strategic roadmap for developing and keeping a strong vendor management program.

For more information, visit www.vendorinsight.com or email info@vendorinsight.com.
